

Installing Your New Magnetic Extension Table

This is what the new tables look like. We have done away with the “legs” and the wooden blocks. The magnets are much easier to attach and it’s much easier to get the table on and off this way.

Your table will come with two slats of wood across the top of it... Leave those on until you’re done with the install.

Four of the plates are already attached to your table. Take the 4 magnets that are in the baggie and stand them up on their sides on the above magnets with the sticky-backed sides facing inside. Slide the magnets out towards the outside edge of the table (towards the clips). Pull the sticky-backed paper off the sticky pads...

Now, place the table on your machine, WITH THE SLATS ON. After making sure it's sitting flush with the machine bed, push the magnet to the side of your machine. Do this for the other 3 magnets. You can now take the slats off your table.
